

SmartStream Coordination Meeting Minutes

November 2, 2005

Attendance: Sophia Bedard; Pete Bostian; Ken Dinsmore; Debbie Hogarty, Cindy Farling; Donna Follin; Ed Green; Randy Keller, Mel Lambert; Cathy McClintock;

1. Purchasing Archive: Sophia reported that the archiving of Purchasing data through 9/25/01 went fine. Mel reported that although it did get rid of some of the vendors, other vendors were not archived which may be due to vendor name changes. Ken inquired if Al Butler's security was used and Pete reported that personal ID's have been removed from all production jobs. Sophia reported that the archived data is still in the archive tables in the source databases and will soon be moved to the DBSarch database.
2. SmartStream Test System: Pete reported that the SmartStream test system is operational on the HP3 computer. C&SS is in the process of creating a procedure where data can be restored from HP4 to HP3 in the event of a problem with the HP4 computer; HP3 is being used as a backup for both SmartStream and Cyborg.
3. SmartStream 7.0: C&SS has the 7.0 software and is in the process of installing it on the file server. Pete reported that he did incur problems downloading the license files and only received them yesterday - the new system has a licensing process that counts the number of users in each application. Although it doesn't stop people from using the application, they get warning messages if the licenses are exceeded. Other users report that they are juggling licenses around by application. Mel said it only affects certain activities and there should be enough licensees to allow that, but Pete indicated that there seem to be a lot of users reporting they are affected by the distribution of licenses and have to make adjustments. C&SS has not yet decided on which computer to install SmartStream 7.0. He also reported that users cannot have both the 7.0 and 6.53 SmartStream clients on their machine; making the installations tedious with re-install of the clients. He hopes to have the system running in test within the next month or so.
4. Miscellaneous: Debbie Hogarty inquired about the issue of copying comments between PR's and PO's and asked if there was any further communication or suggestions from GEAC. As reported in the last meeting, GEAC could not create the problem in 7.0 and assumes the problem will not happen in 7.0. As a result GEAC isn't pursuing the problem in 6.5.3.

Mel reported to Ken that Service Pack I of 7.0 will allow copying of the browser from one client to another.

The next meeting will be held December 7, 2005, at 9 AM in the Building 362 conference room.
